

Problem:

Recognition timeout is not long enough for a specific screen capture when using GoToScreen Block with Check only value set to true.

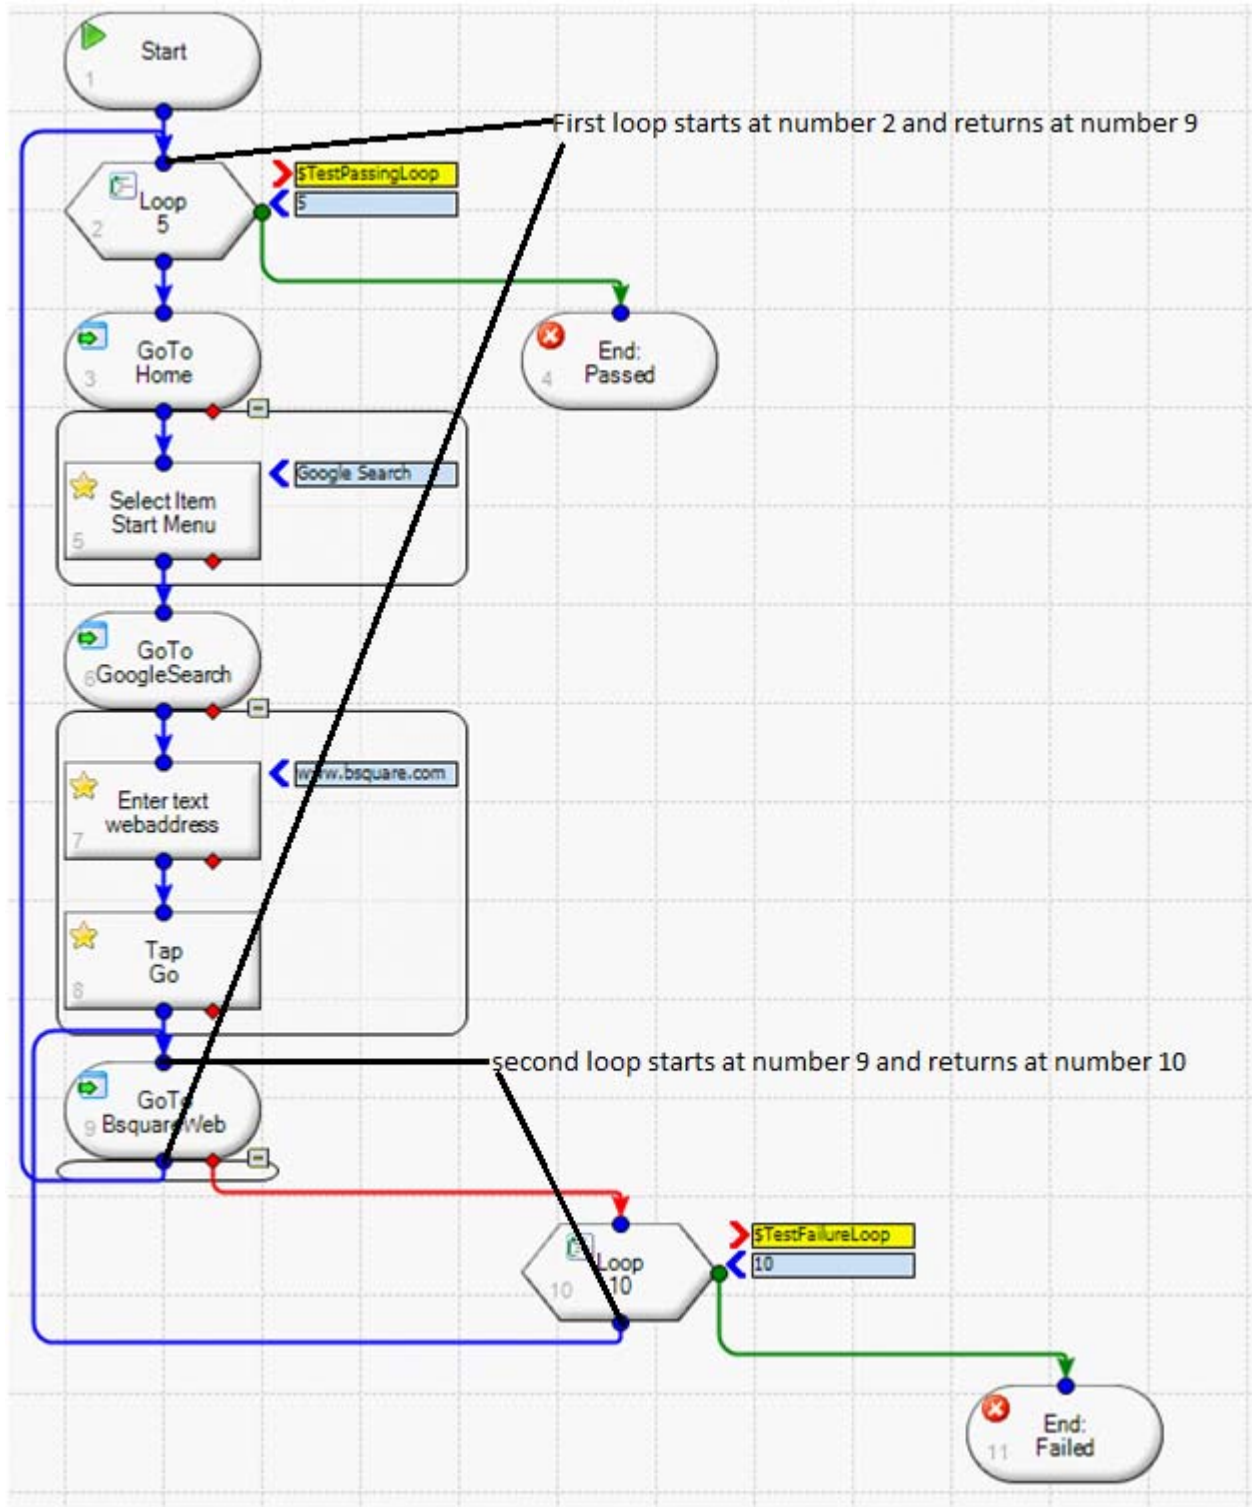

Resolution:

Put the GoToScreen Block in a loop off of the failure section of the GoToScreen Block.

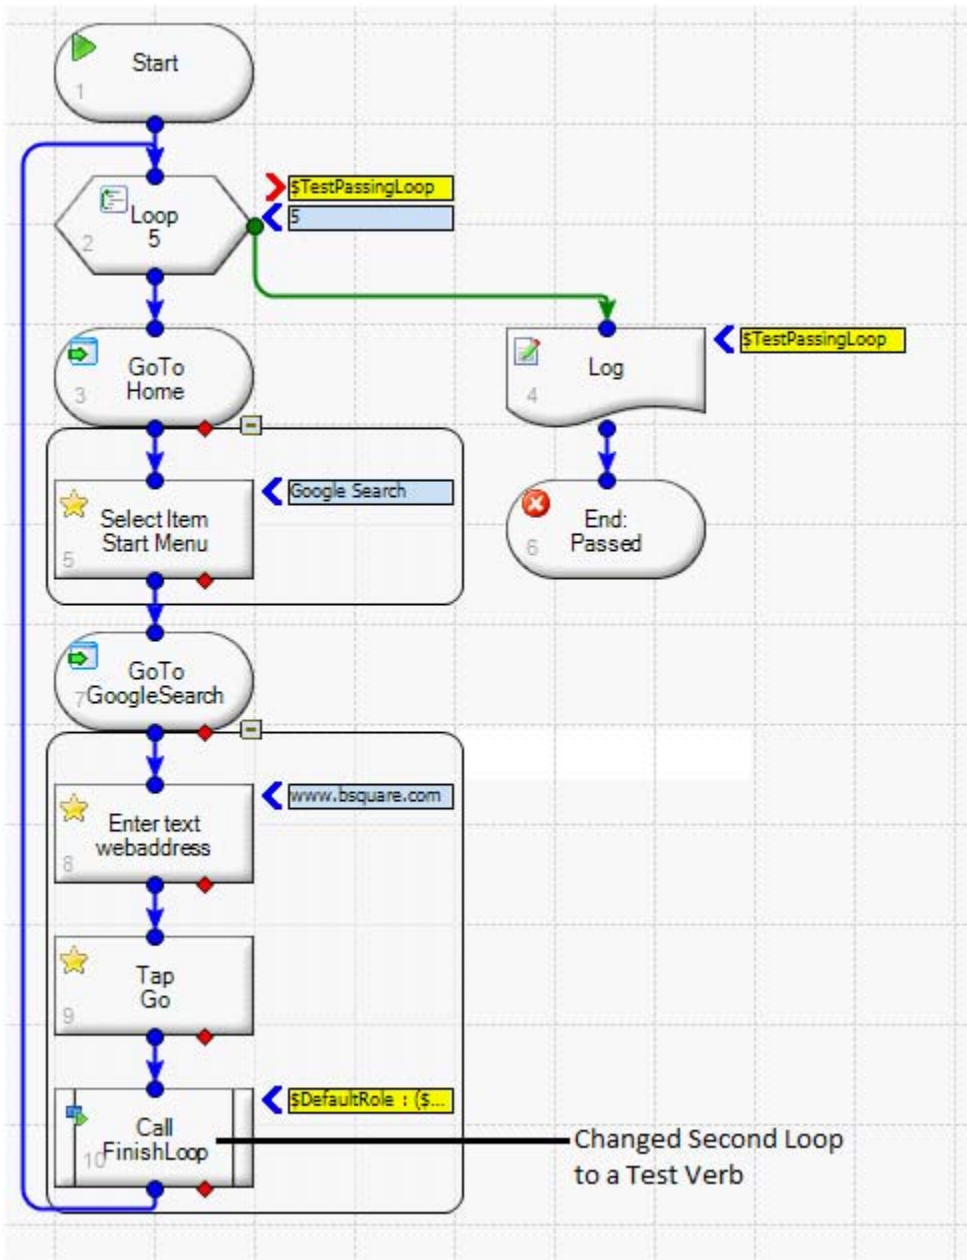

Problem:

When using a loop in your Test Case, adding another loop to handle a recognition timeout problem causes the Test Case to exit the loop early.

Resolution:

1. Put the second loop in as a single TestVerb starting with the GoToScreen Block.

2. Use a condition block instead of a loop. Set and increment the variable yourself.
